His instructions and plans are reasonably clear and the projects are generally perfect for a weekend build.Nelson tends to include a good level of variety in the styles of frames that he builds in this book. Some aren't exactly to my personal taste but they are pretty good plans. Some of the others (Queen Anne and Chippendale) are exactly in the genre I like. I noticed has a great preview for this book so no reason to be too surprised when you open it.I see there was some concern that there isn't enough information on picture frames. In

fairness, picture frames are not the primary focus of this book but the author makes the point that any of the mirrors become frames if you take off the additional trim that makes it a mirror. There is good info for making the frame stock since the same general molding is required for a mirror or a picture frame. I've only read the book a few times but I haven't noticed any mention of using kits. Everything appears to be from stock. If you're looking to make one or more mirrors, then this book is a great reference to get you well on your way. 0 of 0 people found the following review helpful. Was not what I expected. More about creating exaggerated ...By Kathleen L OBrien Was not what I expected. More about creating exaggerated frames around frames and not just frames. For the price (\$2.+), I'll keep it. 0 of 0 people found the following review helpful. as advertised By John A "Jack" Kerwood I had borrowed this book several years ago. Needing to use it again I decided to purchase a copy. The book came in short order and was all I expected.

With this book of patterns and instructions, woodworkers can re-create the antique look of period mirrors with all the conveniences of modern tools and ready-to-use patterns. Eighteen mirror patterns are included, copied directly from the original antiques dating from 1730 to 1885. Beginning with simple frame construction and moving on to more complex designs, this book takes woodworkers step-by-step through every part of the process to ensure woodworking success. Designs range from a Chippendale mirror in birds-eye maple to Queen Anne and Victorian mirrors. The five major styles of mirrors and frames explored are a simple mirror or picture frame without scrolls, a simple mirror with scroll at the top only, a simple mirror with scroll at the top and bottom, a mirror with scroll at the top and sides, and a mirror with scroll at the top, bottom and sides.
